New Survey v4 47	47	0	Results	Edit	Link	Delete
Testing New Survey 34	45	0	Results	Edit	Link	Delete
Create New Survey						

QMethod can handle multiple simultaneous surveys, which is limited only by the data storage plan of your MongoDB remote database provider. You may manage the creation, deletion and editing (before publishing) of surveys through the in-app administrator interface, with the ability to adjust the kurtosis and horizontal distribution of the Q-sort grid, and the ability to create, edit (*WIP) and delete statements.

Respondent Management

*WIP

Through the administrator interface, QMethod allows for easy viewing and manipulation of user data, enabling researchers to remove participants when provided with their unique random identifying string (see [Security and Privacy](#)). User data may also be exported to a printer-friendly format.

QMethod gives you the ability to adjust the kurtosis of your Q-Sort grid, allowing for precise adjustment to account for varying numbers of statements between the range of 0-47.

- By default, the horizontal-x axis of the grid ranges from -3 to +3 to -5 to +5, maximum statement count is 80, the maximum character length for statements is 350 and the character limit for survey names is 100. This may be changed by modifying the relevant configuration files (WIP)

I can see myself around me saying that my yyy is good

<12/17>

Disagree

Neutral

Agree

I can see myself working in yyy

I can see myself living in yyy

I can see myself travelling to yyy for leisure

I can see myself pursuing an international career

I can see myself getting a job more easily thanks to my knowledge of the yyy language

I can see myself studying in yyy

I can see myself translating to/from yyy

I can see myself working in a job that requires me to speak yyy

I can see myself studying yyy for many years

I can see myself speaking yyy in everyday life

I can see myself taking more yyy classes in the future at school

I can see myself teaching yyy

I can see myself working hard to improve my yyy

I can see myself studying yyy in University

I can see myself speaking yyy fluently

I can see myself learning another foreign language more easily

I can see myself speaking yyy better than many other Australians

I can see myself using Social Networks in yyy

I can see myself proud to show that I speak yyy

without difficulty.

Before and End of Survey Questionnaires

QMethod allows for the collection of personal information and feedback for researchers as an integrated part of the QMethod application.

Easy one-click Deployment and Comprehensive hosting Support

QMethod is fully supported by the Heroku Cloud Application Platform, with basic one-click installation. QMethod may also be deployed to any PaaS (Platform as a Service) providers with support for node.js based deployments, such as IBM Cloud, Amazon Web Services and the Google Cloud Platform.

Free for Non-Commercial Usage

QMethod is licensed under the CC Non-Commercial-BY 4.0 License. QMethod is free to use for non-commercial purposes, and you may reference portions of our open-source code as long as proper credit is given.
